Amano Challenge - User List Page

Time: 30 minutes recommended.

1. Fetch Data:

Fetch a list of users from the following API:
https://jsonplaceholder.typicode.com/users

2. Display the Data:

Render a list showing:

- User name
- Email
- Company name

3. Search Feature:

Implement a search box to filter users by name in real-time.

4. Optional (Bonus):

- Add basic styling.
- Show a loading spinner while fetching data.

Feel free to use the internet to look up any coding references, but please do not use AI or ask anyone else for help. We want to see how you code.
